

BRACES WITH DR. COOKE: Smile Arc Protection (SAP) + LightForce Braces

DR. COOKE – The art and science:

Traditional orthodontic treatment has been great at aligning teeth and achieving a stable and functional bite. However, this doesn't always result in a great smile. Modern orthodontics and more progressive orthodontists, such as Dr. Cooke, will also ***evaluate how the teeth are framed by the lips*** and position the teeth such that they provide ***optimal lip support as well as maximized tooth display when smiling***. While Dr. Cooke's goal is to always align your teeth and give you a stable, functional bite, she also ensures a beautiful smile utilizing a treatment philosophy called **Smile Arc Protection (SAP)**.

THE TOOL – LightForce braces:

While all orthodontists have access to LightForce braces and Invisalign, not all take advantage of this amazing technology. Dr. Cooke employs her experience and education to utilize these tools to create a customized bite for you.

Each ***bracket position is designed by Dr. Cooke*** then custom ***fabricated*** by LightForce using some of the world's most sophisticated 3D Printing technology.

This customization allows for ***shorter treatment times*** and ***fewer office visits***.

Your brackets will conform precisely to your teeth, reducing discomfort and improving the straightening accuracy.

The custom brackets are ***translucent***, which decreases the visibility of the braces and has the additional benefit of being ***aesthetically pleasing***.
